33	USA	508	873	1381
34	Russia	538	529	1067
35	Zimbabwe	473	365	838

Archive Overview

- The archive consists of 35 countries' data, consisting of males and female samples.

- Each country's raw (*unscored, items in questionnaire order*) data (*male, female, total dataset*) has been created in each of four formats:
  - Excel 2003 {*.xls}
  - Text {*.csv}
  - SPSS {*.sav}
  - Statistica {*.sta}

- Each country's data (*male, female, total dataset*) has been scored using the UK scorekey, with items now stored in scale order, with these UK-scored datasets being created in the same 4 file formats:
  - Excel 2003 {*.xls}
  - Text {*.csv}
  - SPSS {*.sav}
  - Statistica {*.sta}

  This was done solely as a convenience. Pro-rated (for missing items) scale scores have been computed and stored as the last 4 variables per case in each of these files.

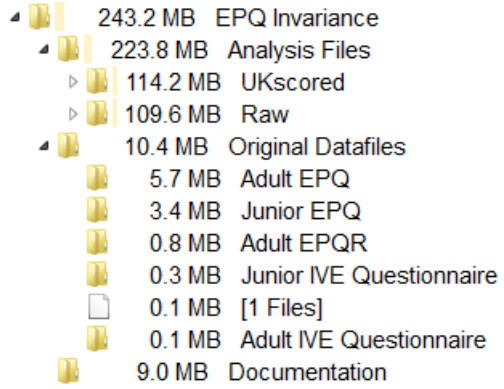
- Every file contains a Case ID, Age (in years), and gender variable (male/female)

- 840 data files comprise the Processed Data archive (the Original Files and Documents are extra to this).

- The original Institute of Psychiatry punched card, paper tape, or key-to-disc "original" files are also stored and labeled appropriately in an "**Original Files**" group.

- All available scorekeys for a selection of countries (including the UK 90 item EPQ scorekey), referenced to the Original data file where relevant, are available in the "**Documentation**" file group. This group also contains this document and some other information on scale means and SDs etc. taken from the original published research articles (where they were available). A pdf scan of the EPQ questionnaire (item text) is also contained within this subdirectory.

The archive file-structure is:



The archive requires ~237 Mb of storage space, but is zipped into a single archive file spanning ~26Mb.

Specific ZipFile-Group Archive Information

Original Datafiles

Questionnaires were of different length, containing differing numbers of "tryout items", or were the precursor to the new EPQ-R. This filegroup also contains datasets for the Junior EPQ, Junior IVE, Adult EPQR, and Adult IVE questionnaires.

Sybil Eysenck provided the information required to decode the Adult datasets which contained the standard 90-items of the EPQ. The 90-item standard EPQ datasets were created back in 1997 for the paper we published in 1998 (Barrett, P. T., Petrides, K. V., Eysenck, S. B. G., & Eysenck, H. J. (1998) The Eysenck Personality Questionnaire: An examination of the factorial similarity of P, E, N, and L across 34 countries. *Personality and Individual Differences*, 25, 5, 805-819.)

Data in these files always contained subject IDs, Age, and Gender.
Gender codes are:
0 = Female, **1 = Male**. *One file actually used a different coding (1 = Male, 2 = female). These codes were reset to standard as part of the current datafile processing operations.*

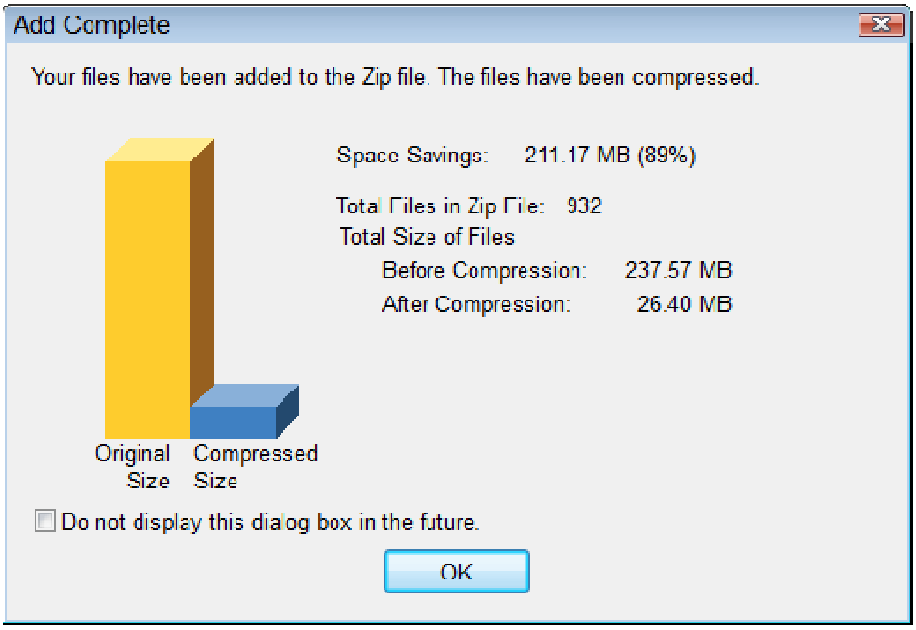
The questionnaire item responses
Always coded **3 = Yes**, **1 = No**. With a missing, spoiled, or otherwise uncertain response coded as a 2.

Some of these files are very old – digital versions constructed from the original punched card and paper tape archives around the mid-1980s on the then Research group's own minicomputer. So, many files contained examples typical of such media – corrupted data, data dropout, lost cards, cards destroyed by the reader etc.

A pre-processing Fortran program was written back in 1997 to clean these files, match records where feasible, impose one of two standard file-formats, and ensure quality was 100% for all remaining data. These cleaned files formed the basis of the input to the current processing software.

ZIPfile Structure and Compression Efficiency Information

EPQ Cross-Cultural Data Archive v1.zip



The archive is stored with the self-contained directory structure. When you unzip the file, it will recreate that structure on the host computer.

88	L_85
89	E_86
90	P_87
91	N_88
92	L_89
93	P_90

The items are appropriately identified by the scale on which they are "keyed".

The items are in "questionnaire order", the text of each item being given in the pdf scan of the 90-item EPQ in the Documents file group.

Each item response is coded:

0 = No

1 = Yes

In Statistica, these codes are embedded as text-label specifications for each item. In SPSS, they are embedded as Value labels associated with each item

The Gender codes are:

0 = female

1 = male

Missing Data is set to "blank" in the csv and Excel files, and defaults to the usual system missing values in the Statistica and SPSS files.

In Statistica (v. 11.0):

	1 id	2 age	3 sex	4 E_1	5 P_2	6 N_3	7 L_4	8 E_5	9 P_6	10 N_7	11 L_8	12 P_9	E_
1	337	21	female	Yes	Yes	Yes	No	No	No	Yes	No	Yes	No
2	338	25	female	Yes	Yes	No	No	Yes	Yes	No	No		Yes
3	339	18	female	No	Yes	Yes	No	No	Yes	No	Yes	No	No
4	340	18	female	No	Yes	Yes	Yes	No	Yes	Yes	Yes	No	Yes
5	341	37	female	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	No
6	342	35	female	Yes	Yes	No	No	Yes	Yes	Yes	Yes	No	Yes
7	343	19	female	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	No	Yes
8	344	17	female	No	Yes	Yes	Yes	Yes	Yes	No	Yes	Yes	Yes

SPSS (v.15.0):

	id	age	sex	E_1	P_2	N_3	L_4	E_5	P_6	N_7
1	337.00	21.00	female	Yes	Yes	Yes	No	No	No	Yes
2	338.00	25.00	female	Yes	Yes	No	No	Yes	Yes	No
3	339.00	18.00	female	No	Yes	Yes	No	No	Yes	No
4	340.00	18.00	female	No	Yes	Yes	Yes	No	Yes	Yes
5	341.00	37.00	female	Yes	Yes	Yes	No	Yes	Yes	Yes
6	342.00	35.00	female	Yes	Yes	No	No	Yes	Yes	Yes
7	343.00	19.00	female	Yes	Yes	Yes	No	Yes	Yes	Yes
8	344.00	17.00	female	No	Yes	Yes	Yes	Yes	Yes	No

The spreadsheet views for these two files snapshots are set to display “Value Labels”. This can of course be changed to show the numeric {0, 1} values …

Excel (2003 format)

	A	B	C	D	E	F	G	H	I	J	K	L	M
1	id	age	sex	E_1	P_2	N_3	L_4	E_5	P_6	N_7	L_8	P_9	E_10
2	337	21	0	1	1	1	0	0	0	1	0	1	0

*[*16th April, 2009*] note the datestamp of the revised files

The UK scored data files are the result of applying the **UK score key** for the 90-item EPQ to each unscored datafile in the Unscored Datafiles group. The scored item-response data is now stored in scale-order (for ease of reliability analysis etc.), along with four new variables added as the last four variables in each file. These variables contain the pro-rated scale scores for the P, E, N, and L scales (pro-rated for missing item response data). Each file has exactly the same variable and labeling structure:

The items are appropriately identified by the scale on which they are "keyed".

The items are in "scale-order", the text of each item being given in the pdf scan of the 90-item EPQ in the Documents file group.

Each keyed item response is coded:

0 = response not in keyed direction {No}

1 = response in keyed direction {Yes}

In Statistica, these codes are embedded as text-label specifications for each item. In SPSS, they are embedded as Value labels associated with each item

The Gender codes are:

0 = female

1 = male

Missing Data is set to "blank" in the csv and Excel files, and defaults to the usual system missing values in the Statistica and SPSS files.

The pro-rated summed scale scores are variables 94-97, and contain long variable text labels to identify them in the file.

For example, a snapshot of a Statistica format file containing these data is:

Data: Australia-Total sample UK scored EPQ item data.sta* (97v by 654c)

C:\EPQ Invariance\Analysis Files\UKscored\Total\Statistica\Australia-Total sample UK scored EPQ item data.sta

crosscul excel file listing #2 - from 1991 or so.xls

.....

some of it is incomplete … although the statistical data was copied from the original published papers where available. i.e. this spreadsheet contains the scale scores derived from the country-specific scorekey; the spreadsheet lists the number of items in each key, along with the alphas and scale means and SDs, by gender.
